 Severfield  
**Rotoflo**

## Dealer Rotoflo silo discharge systems

The Rotoflo discharger provides highly efficient, reliable and controlled flow of difficult materials, including very cohesive materials, without incurring the complications, costs or side effects associated with vibration or aeration.

It represents a cost-effective solution to the common problems associated with discharging difficult materials from storage vessels, including bridging, 'rat-holing' and stagnant zones.

**Low-Profile, easy maintenance design**

## Rotoflo silo discharge

### Severfield Rotoflo dealer

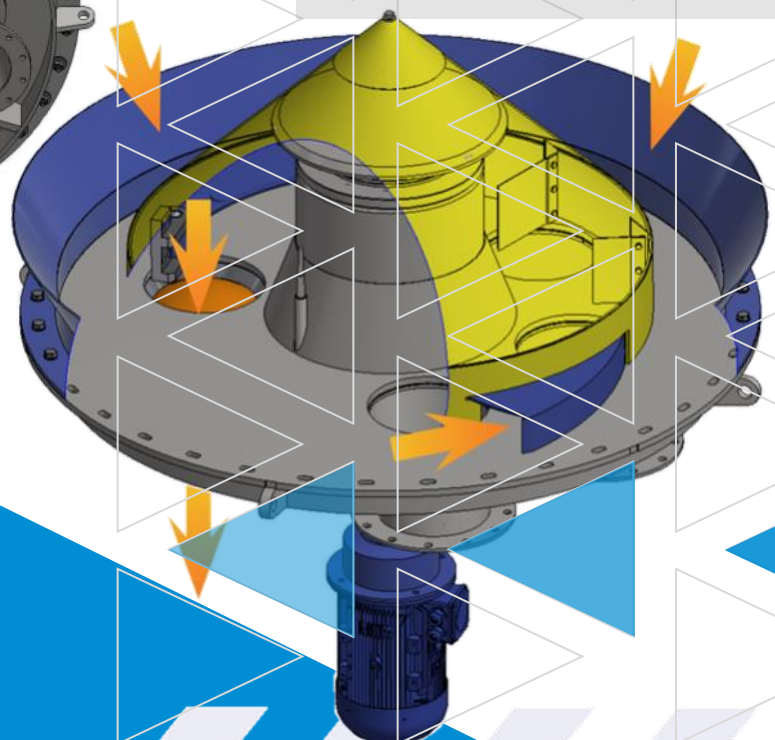

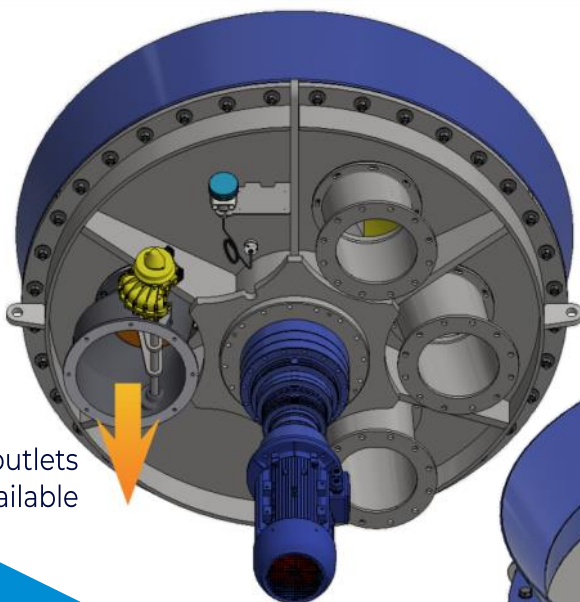

Rotoflo was devised at Portasilos more than two decades ago as a market-leading silo-discharge unit.

Now an exciting addition to Severfield's product solutions, this exceptional silo discharge system has been continuously developed and improved to ensure it remains the leader in silo discharge and material handling solutions technology. Its purpose as a discharge solution for silos and hoppers is to prevent powder flow problems and bridging of materials in storage, providing a reliable, consistent and controlled rate of discharge.

#### How can you prevent powder bridging in silos and hoppers?

With Rotoflo, you can simply and effectively prevent powder bridging and discharge problems in silo systems without the need for vibration or aeration. Rotoflo can help prevent powder bridging by offering:

- ▶ Large diameter active silo outlet
- ▶ Elimination of dead space where contents may consolidate.
- ▶ Low headroom design maximising silo contents
- ▶ Control of discharge rate
- ▶ Consistent feeding over a wide range of throughputs
- ▶ Up to four feed points providing a flexible solution without additional equipment
- ▶ Designed to process a wide range of materials
